ABOUT ME

I am a motivated junior level full stack developer with experience in the basics of web development, popular frameworks in front and backend development. Recently completed an immersive 6-month fullstack coding bootcamp at the University of Toronto, finishing with a 96% final grade.

My blue-collar background has shaped within me an attention to fine details and forged a strong focus that I bring into anything I create. I am self-driven, do not shy away from a hard day's amount of work, and continue my education in web development daily.

EDUCATION

University of Toronto — *Certificate*

AUG 2022 - FEB 2023

A 24-week journey, diving head first into a rigorous curriculum learning full stack programming languages and frameworks through immersive classes and weekly project building.

Udemy Online learning — *Certificate*

2021 - CURRENT DAY

I'm a self learner, and started my journey with youtube tutorials and reading articles online about development. Udemy has been a great source of structured learning for me, with courses like 'JavaScript Tutorial and Projects' and 'NodeJS Tutorial and Projects' by John Smilga, and 'Ultimate MySQL Bootcamp' by Colt Steele. I am still watching, learning and building.

PROJECTS

Timelapse — *Full Stack Collaboration Project using MERN*

<https://timelapse1.herokuapp.com/>

Tech Blog — *Full Stack Tech Blog using SQL*

<https://tech-blog-crud-app-15634.herokuapp.com/>

TECHNICAL SKILLS

Core

JavaScript

Git and Github

Front End

HTML

CSS

React

Sass

Bootstrap

Backend and Databases

Node.js

Express.js

MongoDB w/ Mongoose

MySQL w/ Sequelize
